

Zero Product Property: States that if $a \cdot b = \underline{0}$, then $a = \underline{0}$ or $b = \underline{0}$ or both a and $b = \underline{0}$.

$$4 \cdot \underline{0} = 0 \quad \underline{0} \cdot \underline{0} = 0$$

$$\underline{0} \cdot 5 = 0$$

We use the Zero Product Property to solve polynomial equations in factored form:

- Make sure the polynomial is set equal to 0
- Make sure the polynomial is in Factored form, if it isn't you must factor it.
- Set each of your factors equal to zero and solve.
- These give you the roots, zeros, solutions, or x-intercepts of your parabola.

* leave all answers as simplified fractions or reduced improper fractions *

Example:

1. $(x - 4)(x + 3) = 0$

$$x - 4 = 0 \quad x + 3 = 0$$

$$\boxed{x = 4} \quad \boxed{x = -3}$$

2. $(x + 5)(x - 1) = 0$

$$x + 5 = 0 \quad x - 1 = 0$$

$$\boxed{x = -5} \quad \boxed{x = 1}$$

3. $(2x - 3)(x + 8) = 0$

$$2x - 3 = 0 \quad x + 8 = 0$$

$$\begin{array}{r} 2x - 3 = 0 \\ + 3 \quad + 3 \\ \hline 2x = 3 \\ \frac{2x}{2} = \frac{3}{2} \\ \hline x = 3/2 \end{array}$$

$$\boxed{x = 3/2} \quad \boxed{x = -8}$$

4. $(2x - 1)(3x - 4) = 0$

$$2x - 1 = 0 \quad 3x - 4 = 0$$

$$\boxed{x = 1/2} \quad \boxed{x = 4/3}$$

5. $x(x + 4) = 0$

$$\boxed{x = 0} \quad \boxed{x = -4}$$

6. $x(x - 3)(x + 5) = 0$

$$\boxed{x = 0}$$

$$\boxed{x = 3}$$

$$\boxed{x = -5}$$
